Smootis

Smootis is a mechanism for handleless opening with soft closing for doors on classic hinges. It doesn't need electricity, it doesn't need hinges with soft closing, it takes care of itself. With its help, you can easily open kitchen doors, cabinets in the living room, bedroom, bathroom and anywhere else, and then they close quietly by themselves. The quality of Smootis is proven by TÜV, SGS, UKAS certification guaranteeing 60,000 opening and closing cycles coupled with an unexpectedly good price. Install them in your customers' furniture and you'll have peace of mind.

Smootis

- The door is opened by pushing on its surface, optimally as close as possible to the mechanism.
- The same mechanism will dampen the movement of the door when it is closed.
- For the best possible lowering, the extension of the closed mechanism can be adjusted by +5 mm.
- Easy installation with 4 screws.
- We recommend installing as close to the centre of the door as possible at a distance of:
 - for cabinet body up to 450 mm wide – as far as possible from the cabinet body wall with hinges,
 - for cabinet body width greater than 450 mm (max. 600 mm) = 450 mm from the cabinet body wall with hinges.
- The mechanism is then covered with a cover for a clean look.
- Thanks to its dimensions, it does not take up much space in the cabinet.
